The HCV replicon and HCV replicon enhanced cells are useful in studying HCV replication and expression, and HCV and host, cell interactions, producing HCV RNA and proteins, and providing a system for measuring the ability of a compound to modulate one or more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and hepatocellular carcinoma. The present sequence is an HCV replicon Con 1 mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the HCV sequence appearing as ABK91411 and the information in Claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

are detailed in the specification. Also included are (1) an expression vector comprising a nucleotide sequence coding for the altered nucleic acids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids; (3) a recombinant cell produced by introducing into a human hepatoma cell the altered nucleic acids; (4) producing an HCV (hepatitis C virus) creplicon enhanced cell or which containing a functional HCV replicon; (5) an HCV replicon enhanced cells made in the method; and (6) measuring the ability of a compound to affect HCV activity. The HCV replicons and HCV replicon enhanced cells are useful in studying HCV replicons and HCV creplicon and an adily and host cell interactions, producing HCV RNA and proteins, and providing a system for measuring the ability of a compound to modulate one or more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and chepatocellular carcinoma. The present sequence is the HCV replicon Con 1, used as a basis for the adaptive mutations of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The invention relates to nucleic acid molecules comprising altered HCV CC NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) CC internal ribosome entry site (IRES) region coding for one or more NS3, CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations CC vector comprising a nucleotide sequence coding for the altered nucleic CC acids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids; (3) a recombinant cell produced by introducing into a human hepatoma CC cell the altered nucleic acids; (4) producing an HCV replicon enhanced cell or which containing a functional HCV replicon; (5) CC an HCV replicon enhanced cells made in the method; and (6) measuring the ability of a compound to affect HCV activity. The HCV replication and CC replicon enhanced cells are useful in studying HCV replication and CC expression, and HCV and host cell interactions, producing HCV RNA and CC proteins, and providing a system for measuring the ability of a compound CC to modulate one or more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and CC hepatocellular carcinoma. The present sequence is not shown in the Specification but was created by the indexer using the HCV sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The invention relates to nucleic acid molecules comprising altered HCV CR NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) CC internal ribosome entry site (IRES) region coding for one or more NS3, CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations care detailed in the specification. Also included are (1) an expression cc vector comprising a nucleotide sequence coding for the altered nucleic cacids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids (2) a recombinant cell produced by introducing into a human hepatoma cc cell the altered nucleic acids; (4) producing an HCV (hepatitis C virus) cc replicon enhanced cell or which containing a functional HCV replicon; (5) an HCV replicon enhanced cells ande in the method; and (6) measuring the ability of a compound to affect HCV activity. The HCV replication and HCV cells are useful in studying HCV replication and CC expression, and HCV and host cell interactions, producing HCV RNA and CC expression, and providing a system for measuring the ability of a compound to more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and hepatocellular carcinoma. The present sequence is not shown in the specification but was created by the indexer using the HCV sequence appearing as ABK91411 and the information in Claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

CC internal ribosome entry site (IRES) region coding for one or more NS3,

CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations

CC are detailed in the specification. Also included are (1) an expression

CC vector comprising a nucleotide sequence coding for the altered nucleic

CC acids, which is transcriptionally coupled to an exogenous promoter; (2) a

CC recombinant cell human hepatoma cell comprising the altered nucleic acids

CC; (3) a recombinant cell produced by introducing into a human hepatoma

CC cell the altered nucleic acids; (4) producing an HCV (hepatitis C virus)

CC an HCV replicon enhanced cells made in the method; and (6) measuring the

CC ability of a compound to affect HCV activity. The HCV replicons and HCV

CC replicon enhanced cells are useful in studying HCV replicons and HCV

CC expression, and HCV and host cell interactions, producing HCV RNA and

CC expression, and providing a system for measuring the ability of a compound

CC motant HCV mediated diseases such as liver failure, cirrhosis and

CC mutant of the invention. Note: The present sequence is an HCV replicon Con 1

CC mutant of the invention. Note: The present sequence is not shown in the

CC appearing as ABES1411 and the information in Claim 9

                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to nucleic acid molecules comprising altered HCV CR NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) CR internal ribosome entry site (IRES) region coding for one or more NS3, CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations CC are detailed in the specification. Also included are (1) an expression CC vector comprising a nucleotide sequence coding for the altered nucleic CC acids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids (3) a recombinant cell produced by introducing into a human hepatoma CC ; (3) a recombinant cell or which containing a functional HCV replicon; (5) CC an HCV replicon enhanced cells made in the method, and (6) measuring the CC ability of a compound to affect HCV activity. The HCV replicons and HCV replicon enhanced cells are useful in studying HCV replication and CC proteins, and HCV and host cell interactions, producing HCV RNA and CC proteins, and providing a system for measuring the ability of a compound to modulate one or more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and CC hepatocellular carcinoma. The present sequence is not shown in the specification but was created by the indexer using the HCV sequence CC appearing as ABR91411 and the information in Claim 9
                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to nucleic acid molecules comprising altered HCV CC NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) CC internal ribosome entry site (IRES) region coding for one or more NS3, CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations or ector comprising a nucleotide sequence coding for one or more NS3, CC are detailed in the specification. Also included are (1) an expression or ector comprising a nucleotide sequence coding for the altered nucleic acids, which is transcriptionally coupled to an exogenous promoter; (2) a cc (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids (2) a recombinant cell produced by introducing into a human hepatoma cc (2) it he altered nucleic acids; (4) producing an HCV replicon; (5) an HCV replicon enhanced cells made in the method; and (6) measuring the cability of a compound to affect HCV activity. The HCV replication and CC expression, and HCV and host cell interactions, producing HCV RNA and CC expression, and HCV and host cell interactions, producing HCV RNA and CC proteins, and providing a system for measuring the ability of a compound to more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and CC mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the HCV sequence appearing as ABE91411 and the information in Claim 9
                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                           밁
                                                                                                                                                                          8
                                                                                                                                                                                                                                                                                                                               CC polynucleotides comprising non-naturally occurring HCV sequence and HCV cariants that have a transfection efficiency and ability to survive CC subpassage greater than HCV that have wild-type polyprotein coding cregions. The polynucleotides of the invention are useful for identifying CC replication of HCV in cells of the cell line. They are also useful for testing a compound for anti-viral properties and for inhibiting HCV creating a compound for anti-viral properties and for inhibiting HCV confection. They are also useful for the generation of defined HCV virus confection. They are also useful for the generation of defined HCV virus confection. They are also useful for the generation of defined HCV virus confection. They are also useful for the generation of defined HCV virus confection in the generation of new antiviral targets, a systematic survey of cell culture systems and conditions to identify confections and RNA elements and identification of new antiviral targets, a systematic survey of cell culture systems and conditions to identify confection in cell culture, production of HCV RNA replication and particle crelease, production of adaptive HCV variants capable of more efficiency conhibitor evaluation including those supporting HCV variant swith altered confective HCV particles for vaccination, assays, production of attenuated for imhibitor evaluation including those supporting HCV variant replication, confective HCV particles for vaccination, engineering of attenuated or defective HCV particles for vaccination, engineering of attenuated or confection by the suseful for inducing immunoprotection to HCV in a primate. The present sequence is Hepatitis C virus (HCV) full-length cDNA confection that results in Ser to He at position 1179 of the present sequence is Hepatitis C virus (HCV) full-length cDNA confection that results in Ser to He at position 1179 of the confection to the transfer of the HCV confection to the confection to the present sequence is Hepatitis of the sequence in the HCV confection to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Hepatitis C virus variants having greater transfection efficiency ability to survive subpassage, useful as a vaccine for immunizing to the virus, comprise non-naturally occurring viral sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  23-MAY-2000; 2000US-00576989
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     23-MAY-2001; 2001WO-US016822
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WO200189364-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Synthetic

The invention relates to nucleic acid molecules comprising altered HCV CC NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) CC internal ribosome entry site (IRES) region coding for one or more NS3, CC NSSA, or EMCV IRES mutations, respectively. The location of the mutations CC are detailed in the specification. Also included are (1) an expression CC vector comprising a nucleotide sequence coding for the altered nucleic CC acids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids (1) a recombinant cell produced by introducing into a human hepatoma CC cell the altered nucleic acids; (4) producing an HCV replicon; (5) an HCV replicon enhanced cells or which containing a functional HCV replicon; (5) can HCV replicon enhanced cells made in the method; and (6) measuring the CC ability of a compound to affect HCV activity. The HCV replicons and HCV replicons and HCV and host cell interactions, producing HCV RNA and CC expression, and HCV and host cell interactions, producing HCV RNA and CC expression, and providing a system for measuring the ability of a compound CC to modulate one or more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosts and CC mutant of the invention. Note: The present sequence is an HCV replicon COn 1 expression but was created by the indexer using the HCV sequence CC appearing as ABK91411 and the information in Claim 9
                                                                                                                                            밁

                                                                                                                                                           CC polynuclectides comprising non-naturally occurring HCV sequence and HCV variants that have a transfection efficiency and ability to survive CC variants that have a transfection efficiency and ability to survive CC variants that have a transfection efficiency and ability to survive CC subpassage greater than HCV that have wild-type polyprotein coding CC regions. The polynucleotides of the cell line. They are also useful for replication with HCV and detecting CC replication of HCV in cells of the cell line. They are also useful for the generation of defined HCV virus stocks to develop in vitro and in vivo assays for virus neutralisation, CC attachment, penetration and entry, structure/function studies on HCV proteins and RNA elements and identification of new antiviral targets, a systematic survey of cell culture systems and conditions to identify CC those that support wild-type and variant HCV RNA replication and particle release, production of adaptive HCV variants capable of more efficiency replication in cell culture, production of HCV variants with altered continuogenic HCV particles for vaccination, engineering of attenuated HCV derivatives as possible vaccine candidates, engineering of attenuated HCV deficiency and vaccine candidates, engineering of attenuated HCV deficiency and vaccine candidates, engineering of attenuated HCV deficiency and vaccine candidates. Sequencing of the HCV derivatives for vaccinations and for utilisation of the HCV glucoproteins for targetted delivery of therapeutic agents to the liver or other cell types with appropriate receptors. Vaccine comprising these equence is Hepatitis C virus (HCV) full-length cDNA containing the mutation that results in Ser to Ile at position 1179 of containing the mutation that results in Ser to Ile at position 1179 of containing themse gene and the EMCV IRBS is inserted upstream of the HCV open reading themse.

Total number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Issued_Patents_NA:*
